

Hammar Public Library, Norway
Showit Display

This page shows the elements used for Showit. Showit consists of four elements, two boxes and two bars. Box 195 is available with rotation fittings for Bar 101 allowing the bar to rotate 360°. All elements come with castors adding mobility to the system. Showit is optimal for displaying book front covers and creating themes using books and objects, thus attracting library users.

They are made of painted MDF and are delivered as standard in any NCS or RAL colour (see Design Options page 6). All elements are available with or without laminate on the top surface.

Bar 82
